

# LDEID2470KA5N00

Aliases (DEID2470KA5N00)

LDE, Film, Metallized PEN Stacked, Automotive Grade, 0.047 uF, 10%, 250 VDC, 120 VAC, 125°C, 2220, 2.3 mm

LDE

SMD Chip

Metallized PEN Stacked

Automotive Grade

	RUHS	165
, ∫, T	Qualifications	AEC-Q200
	AEC-Q200	Yes
	Typical Component Weight	0.267 g
	Shelf Life	104 Weeks
<b>/</b> _p	MSL	2a

**General Information** 

Series Dielectric

Style

DALIC

**Features** 

Click here for the 3D model.

Dimensions			
Chip Size	2220		
L	6mm +/-0.3mm		
W	5mm +/-0.4mm		
T	2.3mm MAX		
В	0.4mm +0.5/-0.3mm		
Paskaging Specifications			

Packaging Specifications	
Packaging	T&R
Packaging Quantity	3000

Specifications		
Capacitance	0.047 uF	
Tolerance	10%	
Voltage DC	250 VDC	
Voltage AC	120 VAC	
Temperature Range	-55/+125°C	
Rated Temperature	125°C	
Dissipation Factor	0.8% 1kHz	
Insulation Resistance	1GOhms	
Max dV/dt	100 V/us	

Statements of suitability for certain applications are based on our knowledge of typical operating conditions for such applications, but are not intended to constitute - and we specifically disclaim - any warranty concerning suitability for a specific customer application or use. This Information is intended for use only by customers who have the requisite experience and capability to determine the correct products for their application. Any technical advice inferred from this Information or otherwise provided by us with reference to the use of our products is given gratis, and we assume no obligation or liability for the advice given or results obtained.

### LDEID2470KA5N00

Aliases (DEID2470KA5N00) LDE, Film, Metallized PEN Stacked, Automotive Grade, 0.047 uF, 10%, 250 VDC, 120 VAC, 125°C, 2220, 2.3 mm

#### These are simulations.

This is not a specification!

The responses shown represent the typical response for each part type. Specific responses may vary, depending on manufacturing variation affects of all parameters involved, including the specified tolerances applied to capacitance and unspecified variations of ESR, ESL, and leakage resistance.

The responses shown do not represent a specified or implied maximum capability of the device for all applications.

- The ESR used for ripple "Ripple Current/Voltage vs. Frequency" plots is the ESR at ambient temperature.

- The ESR used for ripple Ripple Currenty votage vs. rrequency plots is unleast at an interact temperature.
  The ESR in the "Temperature Rise vs. Ripple Current" plots is adjusted to each incremental temperature rise before the power and ripple current is calculated.
  The effects shown herein are based on measured data from a multiple part sample of the parts in question.
  Ripple capability of this device will be factored by thermal resistance (Rth) created by circuit traces (addi affects of all parameters involved, including the specified tolerances applied to capacitance and unspecified variations of ESR, ESL, and leakage resistance.
  The peak voltages generated in the "Temperature Rise vs. Combined Ripple Currents" plot are calculated for each frequency and are not combined with voltages
- generated at any other harmonics.

   Please consult with the catalog or field applications engineer for maximum capability of the device in specific applications.

All product information and data (collectively, the "Information") are subject to change without notice.

KEMET K-SIM is designed to simulate behavior of components with respect to frequency, ambient temperature, and DC bias levels. The responses shown represent the typical response for each part type. Specific responses may vary, depending on manufacturing variation effects of all parameters involved, including the specified tolerances applied to capacitance and unspecified variations of ESR, ESL, and leakage resistance.
